This "conversational" style is a major advantage, making it accessible even to machinists with limited programming experience.

Key Components of Prototrak Age 2 Programs

A typical Prototrak Age 2 program consists of several essential components:

- **Machine Setup:** This initial section defines parameters such as the work offset, tool length compensation, and feed rates.

Proper setup is critical for accurate machining.

- **Geometric Definition:** This involves specifying the coordinates of points and the geometry of features to be machined. This often uses simple commands like "GO/TO X Y Z" to move the tool.
- **Cutting Operations:** These instructions dictate the specific machining operations, such as drilling, milling, and turning. Parameters like feed rate, spindle speed, and depth of cut are specified here.
- **Tool Selection:** The program explicitly selects the appropriate tool for each operation, ensuring correct machining performance.
- **Program Termination:** This section signals the completion of the machining process.

Prototrak Age 2 Programming Examples: Practical Applications

Let's look at some practical examples to solidify our understanding. Consider a simple milling operation:

Example 1: Milling a Rectangular Pocket

...

GO/TO X1.0 Y1.0 Z0.0

GO/TO X1.0 Y2.0 Z-0.5 ;Start of Cut

RAPID X5.0 Y2.0 ;Rapid Traverse

FEED X5.0 Y1.0 Z-0.5 ;Cut in X direction

FEED X1.0 Y1.0 Z-0.5 ;Cut in Y direction

GO/TO X1.0 Y1.0 Z0.0 ;Retract

END

...

This code snippet demonstrates the simplicity of the Prototrak Age 2 language. Each line corresponds to a specific action, making it easy to follow and modify. Note the use of "RAPID" for faster non-cutting movements and "FEED" for controlled cutting motions.

Example 2: Drilling a Hole

```
***  
  
GO/TO X2.5 Y2.5 Z0.0  
  
GO/TO X2.5 Y2.5 Z-1.0 ;Drill to depth  
  
GO/TO X2.5 Y2.5 Z0.0 ;Retract  
  
END  
  
***
```

This exemplifies how straightforward drilling operations can be programmed.
