Frequently Asked Questions (FAQ)**Q1: What are the minimum system requirements for Erdas Imagine?**

A1: The system requirements vary depending on the specific version of Erdas Imagine and the complexity of the tasks you intend to perform. Generally, you'll need a powerful computer with a significant amount of RAM (at least 16GB is recommended), a fast processor (multi-core CPU), and a dedicated graphics card. Check the official Hexagon Geospatial website for the most up-to-date specifications for your version.

Q2: How can I learn to use Erdas Imagine effectively?

A2: Erdas Imagine offers extensive online tutorials and documentation. Hexagon Geospatial also provides training courses for various skill levels. Additionally, numerous online resources, including forums and user communities, offer support and guidance. Start with the basics and gradually progress to more advanced functionalities.

Q3: What is the difference between supervised and

unsupervised classification?

A3: Supervised classification requires you to provide training data (samples of known classes) to guide the classification process. Unsupervised classification, on the other hand, automatically groups pixels based on their spectral similarities without any prior knowledge of the classes. Supervised classification typically yields more accurate results but requires more effort in preparing training data.

Q4: How does orthorectification improve image accuracy?

A4: Orthorectification removes geometric distortions from imagery, ensuring that all pixels represent the same ground area. This is crucial for accurate measurements and spatial analysis. It corrects for terrain relief, sensor perspective, and Earth's curvature, resulting in a geometrically corrected image suitable for precise measurements and overlaying with other GIS data.

Q5: Can I use Erdas Imagine for time-series analysis?

A5: Yes, Erdas Imagine is well-suited for time-series analysis. You can import and process multiple images acquired over time to monitor changes in land cover, environmental conditions, or other phenomena. The software provides tools to analyze temporal trends and visualize changes over time.

Q6: Is Erdas Imagine compatible with other GIS software?

A6: Yes, Erdas Imagine integrates well with other popular GIS software packages, allowing for seamless data exchange and workflow integration. Commonly used interoperability formats such as shapefiles, GeoTIFFs, and others ensure compatibility.

Q7: What types of imagery can I process with Erdas Imagine?

A7: Erdas Imagine can process a wide range of imagery types, including satellite imagery (Landsat, Sentinel, etc.), aerial photographs, drone imagery, and various multispectral and hyperspectral data. The software supports numerous image formats.

Q8: What is the cost of an Erdas Imagine license?

A8: The cost of an Erdas Imagine license varies depending on the specific version, modules included, and licensing options (perpetual

or subscription). It's best to contact Hexagon Geospatial directly for accurate pricing information.
