Structure and Content: What to Expect

Most fundamentals of pharmacology paperbacks follow a similar structure. Expect chapters covering:

- **Introduction to Pharmacology:** Definitions, history, drug classification systems (e.g., therapeutic, chemical).
- **Pharmacokinetics:** Detailed explanations of absorption, distribution, metabolism (including hepatic enzymes like CYP450), and excretion (including renal clearance). This section often includes drug concentration curves and mathematical models for simple pharmacokinetic calculations.
- **Pharmacodynamics:** Detailed explanations of drug receptors, receptor-drug interactions (agonists, antagonists, partial agonists), dose-response curves, and therapeutic indices.
- **Drug Receptors and Mechanisms of Action:** This section delves into how different types of drugs interact with their target receptors to elicit their therapeutic effects, often categorized by receptor family (e.g., G-protein coupled receptors, ion channels).
- **Adverse Drug Reactions and Drug Interactions:** A vital section explaining common side effects, drug interactions (pharmacokinetic and pharmacodynamic), and strategies for managing these issues. This often includes discussions of drug

allergies and hypersensitivity reactions.

- **Therapeutic Drug Monitoring (TDM):** Explaining the importance of monitoring drug levels in the blood to optimize treatment and minimize adverse effects. This often includes examples of drugs requiring TDM (e.g., aminoglycosides, antiepileptics).
- **Specific Drug Classes:** Many texts dedicate chapters to specific drug categories (e.g., analgesics, antibiotics, cardiovascular drugs), providing detailed information on individual medications within each class.
