Preparing for Your Fetal Pig Dissection: Safety and Materials

Before beginning your fetal pig dissection, ensure you have all the necessary materials and understand the safety precautions. This section of our fetal pig lab guide focuses on the crucial initial steps.

Essential Materials

- **Fetal pig specimen:** Obtain a preserved specimen from your instructor. The size and preservation method will vary.
- **Dissecting tray:** A sturdy tray to hold the specimen and prevent spills.
- **Dissecting kit:** This typically includes scalpels, scissors, forceps, probes, and pins. Ensure the tools are sharp and clean.
- **Gloves:** Wear disposable gloves throughout the entire procedure to maintain hygiene and prevent contamination.
- **Apron:** A lab apron or coat will protect your clothing from any

spills.

- **Eye protection:** Safety goggles are essential to prevent accidental splashes.
- **Paper towels:** For cleaning up spills and excess fluids.
- **Dissecting guide:** A detailed anatomical chart or textbook is invaluable for identification.
- **Camera (optional):** Photographing your progress can be helpful for later review and comparison.

Safety Precautions

- **Sharp objects:** Handle all dissecting instruments with extreme care to avoid cuts and injuries. Always cut away from yourself and others.
- **Preservative:** Fetal pigs are preserved in formaldehyde or a similar solution. Avoid skin contact and inhalation of fumes. Work in a well-ventilated area.
- **Waste disposal:** Dispose of all materials, including the fetal pig specimen, according to your instructor's guidelines. Follow proper biological waste disposal procedures.
- **Hygiene:** Wash your hands thoroughly with soap and water before and after the dissection.

Fetal Pig Dissection Techniques: A Step-by-Step Guide

This section of our fetal pig lab guide details the step-by-step procedure for dissecting the fetal pig. Remember to work methodically and carefully, referencing your anatomical guide frequently.

1. **External Examination:** Begin by observing the external features of the fetal pig. Note the size, shape, and presence of any external abnormalities. Pay attention to the umbilical cord and its connection.

2. **Incision and Incisions:** Carefully make incisions following the guidance provided by your instructor. Typically, an incision along the midline of the abdomen is the first step. Use caution with the scalpel to avoid deep cuts.

3. **Organ System Examination:** Once the abdominal cavity is opened, begin examining the various organ systems. Start with the digestive system (stomach, intestines, liver, pancreas), followed by the urinary system (kidneys, bladder), and the reproductive system. (Note: The

reproductive systems will vary depending on the sex of the fetal pig).

4. Respiratory and Cardiovascular Systems: Carefully expose the respiratory system (lungs, trachea, diaphragm) and the cardiovascular system (heart, major blood vessels). Observe the location and connections of these vital organs. This requires careful manipulation and precise incisions.

5. Nervous System (Optional): Depending on the scope of your lab, you may also examine parts of the nervous system. This often involves carefully removing the skull to view the brain.

6. Documentation and Analysis: Throughout the dissection, meticulously document your observations using diagrams, photographs, and detailed notes. This documentation is crucial for understanding the anatomy and drawing conclusions.

Key Observations and Anatomical Features of the Fetal Pig

Analyzing the fetal pig's anatomy helps you understand basic mammalian biology. This part of the fetal pig lab guide highlights some key features.

- **Digestive System:** Observe the path of food through the esophagus, stomach, small and large intestines. Note the size and location of the liver, pancreas, and gallbladder.
- **Respiratory System:** Examine the lungs, trachea, and bronchi. Note their connection to the diaphragm and how they facilitate breathing.
- **Cardiovascular System:** Observe the four-chambered heart and the major blood vessels. Trace the flow of blood through the heart and major arteries and veins.
- **Urinary System:** Locate the kidneys, ureters, bladder, and urethra. Understand their role in waste excretion and fluid balance.
- **Reproductive System:** Examine the ovaries (female) or testes (male) and their associated structures. This section will demonstrate significant sexual dimorphism.
- **Nervous System:** If included in your dissection, observe the brain, spinal cord, and peripheral nerves.

Ethical Considerations and Alternatives to Fetal Pig Dissection
