FAQ: Industrial Revolution Study Guide with Answers

Q1: What were the major differences between pre-industrial and industrial societies?

A1: Pre-industrial societies were largely agrarian, with most people working in agriculture. Production was slow and manual. Industrial societies saw a shift to factory-based production, mechanization, and mass production, leading to rapid urbanization and the growth of new social classes.

Q2: How did the Industrial Revolution impact women and children?

A2: Women and children often worked long hours in dangerous conditions in factories for low wages. They faced exploitation and limited opportunities. However, it's crucial to note that women also found new opportunities in factory work, albeit under often harsh conditions.

Q3: What were some of the negative consequences of the Industrial Revolution?

A3: Negative consequences included pollution, urban overcrowding and poverty, child labor, unsafe working conditions, and the widening gap between the rich and the poor.

Q4: How did the Industrial Revolution contribute to imperialism?

A4: The Industrial Revolution created a need for raw materials and new markets, fueling European imperialism and the colonization of vast territories around the world. This led to exploitation of colonial populations and resources.

Q5: What role did transportation play in the Industrial Revolution?

A5: Improved transportation, such as canals, railroads, and steamships, was crucial. They facilitated the movement of raw materials, manufactured goods, and people, accelerating industrial growth and connecting markets.

Q6: What were some of the key differences between the Industrial Revolutions in different countries?

A6: While Britain led the way, other countries industrialized at different paces and in different ways, influenced by their own unique resources, political systems, and social structures. For example, the American Industrial Revolution was spurred by readily available natural resources and a burgeoning market.

Q7: How did the Industrial Revolution impact global trade?
